0304475435

FA-447
Felton House
North side of the intersection of Western and Western Run Roads
Not accessible
1849

The Felton house and its outbuildings were part of Thomas Bond's large real estate holdings which extended south from here to include the Willow Mills and part of the present Greencroft development.

It was sold in 1877 by Bond's son to Thomas P. Williams. The property remained in the Williams family until 1918 when bought by Harry H.

Durham to become part of Durham Farms. Subsequent owners were Charles

E. McManus, who deeded the farm to the University of Maryland for experimentation in scientific farming, and Donald Stubbs, owner of the mushroom farm which adjoins it on the west. In 1951, the present owners, Mr. and Mrs. Lloyd C. Felton, purchased the house and surrounding land.

The reliable datestone gives 1849 as the construction year and is the only datestone in this district which also gives the initials of the mason.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Felton House is a two and one-half story house of rubble stone, three bays in length, with a gable roof; it faces south. Added to the east end is a one bay, one and one-half story wing. Two dormer windows on the south side, and one on the north, light the attic story of the main house, while a single dormer in each side, partially extending into the stone wall below, lights the upper story of the wing. A pair of brick chimneys rises flush with the west gable, and a stone chimney rises from the east gable of the wing. At the top of the east gable of the main house is a stone with the following inscription carved therein:

T. R. BOND 1849 T. S. MASn

A one story, hipped roof porch with wooden Tuscan columns extends across the entire south front, and a one story shed roofed frame addition extends across the north.

Only two bays are expressed on the north side of the main house, the easterly with a window at mid-story height, expressing the stair landing inside.

The principal entrance is in the easterly bay of the south front, and all windows are 6/6; shutters are missing. The wood cornice is traditional in form, with a Greek-revival crown moulding returning against the masonry around the fascia. Tapered barge boards are mounted against the gable walls.

The interior of this house is inaccessible.

Immediately north of the house is an octagonal ice house, its rubble stone walls extending a few feet above grade. The octagonal pyramidal roof, eovered with wood shingles, is topped with an octagonal cupola with louvers on all sides; its roof is a minature of the roof below, and a tall wooden spike finial extends through its peak. A tall dormer in the easterly roof slope contains a beaded board door, admitting to the interior. The interior was inaccessible.

STATEMENT OF SIGNIFICANCE

The Felton House, located on the north side of the intersection of Western and Western Run Roads, was the home of Thomas Bond and his wife. Its reliable datestone gives 1849 as the date of construction and is a standard for dating other houses in the region. This datestone, too, is the only one seen in this district which gives the initials of the mason.

The house and its outbuildings were part of Thomas Bond's large real estate holdings which extended south from here to include the land around the Willow Mills and part of the present Greencroft development.

John Bond acquired his father's home in 1877 and sold it in 1883 to Thomas P. Williams. The property remained in the Williams family until 1918 when bought by Harry H. Durham to become part of Durham Farms.

Charles E. McManus became the owner in 1936. He was an executive of the Crown Cork and Seal Company and founder of McManus Cork Oak Project. Engaged in scientific farming and experimentation, McManus deeded the property to the University of Maryland which failed to utilize the land an, in turn, sold it to Donald Stubbs.

Mr. Stubbs operates a mushroom farm which adjoins this property on the west. In 1951, he sold the house and four acres to the present owners, Mr. and Mrs. Lloyd C. Felton.

Continuation Sheet # 1

Question #7 Description (Continued)

North of the house and ice house, across a sloping meadow, is the spring house, a rubble stone structure of one and one-half storys, its gabled roof cantilevered beyond the south wall to shield it from the sun. Through the south wall are two doors, and in each end is a small louvered opening. The framed half-gables of the cantilevered roof are filled with wood louvers. The second floor, within the roof space, is accessible through a door in the east gable; the door is of vertical boards hung on long strap hinges.
